

PLESIOSAUR ENCOUNTER

Your mission is to go back in time to the early Jurassic period in search of the Plesiosaur. Although this marine reptile was probably a fierce hunter and predator, you *should* be okay in the timepod. We'd like you to observe the plesiosaur in its natural habitat and report back to us.

TIME JUMP: EARLY JURASSIC

II PAUSE

RISK LEVEL: HIGH

MISSION BRIEFING

front camera
depth: 221m
roll: 0
pitch: 12

You are about to travel back in time over 65 million years to the early Jurassic period. Your timepod will materialise deep in the Jurassic ocean, in the area that will become the British Isles. Check your radar for any signs of movement and head towards them.

If you find a plesiosaur DO NOT get too close. Although you should be okay in the timepod, we don't want to scare the animal. Your mission is to observe only and then to report back. You may see ammonites too. They are the main source of food for the plesiosaur, so again, don't get too close or you may be mistaken for lunch!

TimePod

CAUTION: You may experience time distortion and disorientation.

We'd like you to choose one of these report styles:

Scientific: Your report must include details of what you have seen and experienced. We'd like to know what the creature looked like (its size and appearance) and to describe how it swam and moved.

Journalist: What you felt when you saw this ancient, extinct animal in the flesh. Describe the event so people reading can feel the excitement you experienced at the time.

REPORT ASSIGNMENT
